A2 - WHC CHAINS OF CUSTODY

THIS PAGE INTENTIONALLY
LEFT BLANK.

DON'T SAY IT -- *Write It!* Date: September 28, 1995

To: File (BY-108 Core Analysis) From: KL Silvers

Subject: BY-108 SAMPLES RECEIVED WITHOUT CHAIN-OF-CUSTODY

Tank BY-108 Core 99, Segments 1-4 were received from the WHC 222-S Laboratory starting on August 15 and completing on August 25, 1995. All shipments were documented via a Radioactive Shipping Record (RSR). No chain-of-custody documentation accompanied the shipments. Sample identification (i.e. sample number) was communicated by a fax. During the removal of samples from the shipping casks it was noted that the sample numbers for Segment 4A, 4B, 4C, and 4D did not match the previous faxed sample identification information. The WHC point of contact (POC) was contacted and the issue communicated. The POC advised that Segment 4 had been further subsampled (30g) into new containers with new identification numbers. The new numbers were later faxed and the correlation to sample identification completed.

TANK CHARACTERIZATION
TEST INSTRUCTIONS FOR HLRF RECEIPT AND ANALYSES OF SST 241-BY-108, CORE 99 SEGMENTS 1-4

DATE PREPARED: August 23, 1995 PREPARED BY: KL Silvers

SAMPLE NUMBERS: 95-07931 - 95-07948

APPROVED BY: [signature] DATE: 8/25/95

CONTROLLING DOCUMENTS: Project No: 21372

WHC TCP: Tank 241-BY-108 Tank Characterization Plan (WHC-SD-WM-TP-275)
Revision OE - ECN No: 6621348 (August, 1995)
PNL QAP: MCS-033, Revision 2 (April, 1995)
Controlling Procedure: PNL-ALO-010

INTRODUCTION

This Test Instruction (TI) defines the scope of work to be completed on Single-Shell Tank (SST) 241-BY-108, Core 99 Segments 1, 2, 3 and 4. The samples from this tank will be analyzed according to TCP (WHC-SD-WM-TP-275 Rev. OE).

The subsampled tank material from WHC will be analyzed as-received for TGA (on unhomogenized tank material subsamples and an aliquot from each of the two drainable liquid samples). In addition, DSC and bulk density will be required on the homogenized samples.

Homogenization will be conducted on all non-TGA sample material. A homogenization check will be performed on Segment 1 and Quarter-Segment 4B. An aliquot of homogenized sample material will be removed and transferred to the Shielded Analytical Laboratory (SAL) for preparation of the homogenization check samples. An ICP and GEA analysis will be conducted to evaluate the homogenization process. If the analytical results indicate the sample to be non-homogenized, another attempt will be made to homogenize prior to performing any analytical determination.

Homogenized sample material will be transferred to the SAL for preparation and distribution to the analytical laboratories to complete the scope of work.

Sample receiving and homogenization activities should be charged against work package K28859 and K28860, respectively.

All activities identified in this Test Instruction shall be charged against Project 21372. All analyses are to be completed at Impact Level 2. All analyses are to be completed following the identified procedures. Any deviations to the procedures must be documented and this documentation must

accompany the analytical data. All analytical data are returned to the Laboratory Support Office.

REQUESTED ANALYSES

Requested Analysis		Procedure Number	WP#
TGA	unhomogenized sample	PNL-ALO-508	K28861
DSC	homogenized subsample	PNL-ALO-508	K28861
Bulk Density	homogenized subsample	PNL-ALO-501	K28865

A-HOT CELL SAMPLE INSTRUCTIONS

- All analyses should be performed in duplicate if adequate sample is available. If adequate sample is not available, document and notify the PM.
- Collect a TGA sample aliquot from each of the two drainable liquid samples (i.e. Segment 2 and Segment 3).
- Perform TGA analyses on the unhomogenized solid and liquid samples.
- All other samples should be homogenized. In the event insufficient sample exist to perform the traditional homogenization, a best effort should be made to thoroughly mix the material prior to analysis.
- A homogenization check will be conducted on Segment 1 and Quarter-Segment "B" from Segment 4 (i.e. 4B). Collect duplicate homogenization check samples from the top and bottom (approx. 3 grams) and transfer to the SAL. No further testing shall be conducted until results of the homogenization check are reviewed and results deemed valid. RLS 9/25/95
- The ACL sample numbers should be assigned as follows:

CORE IDENTIFICATION	ACL NUMBER
Core 99 - Segment 1 (TGA-unhomogenized)	95-07931
Core 99 - Segment 1	95-07941
Core 99 - Segment 2 (liquid and subsample liquid for TGA)	95-07932

INTRODUCTION

This Test Instruction (TI) defines the scope of work to be completed on Single-Shell Tank (SST) 241-BY-108, Core 99 Segment 1 and Quarter-Segment 4B homogenization check samples. The samples from this tank will be analyzed according to TCP (WHC-SD-WM-TP-275 Rev. OE).

All activities identified in this Test Instruction shall be charged against Project 21372. All analyses are to be completed at Impact Level 2. All analyses are to be completed following the identified procedures. Any deviations to the procedures must be documented and this documentation must accompany the analytical data. All analytical data are returned to the Laboratory Support Office.

SAL SAMPLE PREPARATION FOR HOMOGENIZATION CHECK:

Duplicate fusions should be completed for each of the two homogenization check samples. The samples will be distributed for both ICP and GEA. A single Methods Blank is required per batch.

Caustic Fusion (WPkg K28863) PNL-ALO-115
(QC Requirements: Duplicate, Blank)

Perform duplicate acid digestions via PNL-ALO-129 for visual confirmation of sample solubility.

REQUESTED ANALYSES FOR HOMOGENIZATION CHECK:

Requested Analysis	Procedure Number	Task Leader	WP#
ICP (Fusion)	PNL-ALO-211	Urie	K28866
GEA (Fusion)	PNL-ALO-450	Greenwood	K28872

INTRODUCTION

This Test Instruction (TI) defines the scope of work to be completed on Single-Shell Tank (SST) 241-BY-108, Core 99 Segments 1, 2, 3 and 4. The samples from this tank will be analyzed according to TCP (WHC-SD-WM-TP-275 Rev. OE).

This TI contains instructions for the preparation and analyses by the ACL of all segments, quarter-segments, and drainable liquids from Core 99.

All activities identified in this Test Instruction shall be charged against Project 21372. All analyses are to be completed at Impact Level 2. All analyses are to be completed following the identified procedures. Any deviations to the procedures must be documented and this documentation must accompany the analytical data. All analytical data are returned to the Laboratory Support Office.

SAL SAMPLE PREPARATION INSTRUCTIONS FOR SEGMENTS AND QUARTER-SEGMENTS:

The following tank material samples were transferred from the HLRF:

CORE IDENTIFICATION	ACL NUMBER
Core 99 - Segment 1 (homogenized, mechanical)	95-07941
Core 99 - Segment 2 (drainable liquid)	95-07932
Core 99 - Quarter-Segment 2A (homogenized, manual)	95-07942
Core 99 - Quarter-Segment 2D (homogenized, manual)	95-07943
Core 99 - Segment 3 (drainable liquid)	95-07935
Core 99 - Quarter-Segment 3A (homogenized, manual)	95-07944

CORE IDENTIFICATION	ACL NUMBER
Core 99 - Quarter-Segment 4A (homogenized, mechanical)	95-07945
Core 99 - Quarter-Segment 4B (homogenized, mechanical)	95-07946
Core 99 - Quarter-Segment 4C (homogenized, mechanical)	95-07947
Core 99 - Quarter-Segment 4D (homogenized, mechanical)	95-07948

The following sample preparation steps are required:

Method		Procedure
Acid Digestion for ICP - liquid (QC Requirements: Duplicate, Blank, Spike, Spike Control)	(WPkg K28862)	PNL-ALO-128
Caustic Fusion - Na_2O_2 (QC Requirements - ICP : 1 Duplicate per batch, Blank, Post Digestion Spike, LCS per prep)	(WPkg K28863)	PNL-ALO-114
Caustic Fusion - KOH (QC Requirements - Radchem: Duplicate, Blank) (QC Requirements: Duplicate, Blank, Post Digestion Spike, LCS per prep)	(WPkg K28863)	PNL-ALO-115
Water Leach (QC Requirements - IC: Duplicate, Blank, Spike, Spike Control) (QC Requirements - ICP: Duplicate, Blank)	(WPkg K28864)	PNL-ALO-103
Total CN Prep (QC Requirements: Duplicate, Blank, Spike, Spike Control)	(WPkg K28868)	PNL-ALO-285

REQUESTED ANALYSES:

Requested Analysis	Procedure Number	Task Leader	WP#
ICP (Acid, Fusion, Water Leach)	PNL-ALO-211	Urie	K28866
IC (Water Leach)	PNL-ALO-212	Urie	K28867
CN (Direct)	PNL-ALO-285	Urie	K28868
TOC by Hot Persulfate (Direct - solids)	PNL-ALO-381	Steele	K28869
TOC (Direct - liquids)	PNL-ALO-382	Urie	K28869
Total Alpha (Fusion, Acid)	PNL-ALO-421	Greenwood	K28870
AEA (Pu-239/240) (Fusion)	PNL-ALO-422/423	Greenwood	K28871

Requested Analysis	Procedure Number	Task Leader	WP#
GEA (Fusion, Acid)	PNL-ALO-450	Greenwood	K28872
Total Beta (Fusion, Acid)	PNL-ALO-430/431	Greenwood	K28873
Sr-90 (Fusion)	PNL-ALO-433/431	Greenwood	K28874
U-Laser (Fusion)	PNL-ALO-445	Greenwood	K28875

SAMPLE IDENTIFICATION SYSTEM FOR SEGMENT AND QUARTER-SEGMENTS:

The following sample identification system will be followed. All samples will be idenitified as 95-XXXXX-Y#, where 95-XXXXX is the ACL number. The "Y" letter will identify a Sample Preparation Method. The "#" identifies replicate analyses using the sample preparation method (i.e., duplicates, spikes, blanks, etc.). The Sample Preparation Methods codes are:

A	Acid Digestion
C	Water Leach
D	Direct
G	Cyanide Sample Prep
H	Caustic Fusion - KOH
J	Carbon
N	Caustic Fusion - Na_2O_2

The replicate analysis codes are:

1	Sample
2	Sample Duplicate
3	Methods Blank
4	Matrix Spike
5	LCS / Blank Spike
6	Post Digestion Spike

TANK CHARACTERIZATION
TEST INSTRUCTIONS FOR ANALYSES OF
SST 241-BY-108, CORE 99 SEGMENTS 1-4

DATE PREPARED: September 6, 1995 PREPARED BY: KL Silvers

SAMPLE NUMBERS: 95-07931 - 95-07948

APPROVED BY: DATE: 9/6/95

CONTROLLING DOCUMENTS: Project No: 21372

WHC TCP: Tank 241-BY-108 Tank Characterization Plan (WHC-SD-WM-TP-275)
Revision OE - ECN No: 6621348 (August, 1995)
PNL QAP: MCS-033, Revision 2 (April, 1995)
Controlling Procedure: PNL-ALO-010

INTRODUCTION

This Test Instruction (TI) defines the scope of work to be completed on Single-Shell Tank (SST) 241-BY-108, Core 99 Segments 1, 2, 3 and 4. The samples from this tank will be analyzed according to TCP (WHC-SD-WM-TP-275 Rev. OE).

This TI contains instructions for the preparation and analyses by the ACL of all segments, quarter-segments, and drainable liquids from Core 99.

All activities identified in this Test Instruction shall be charged against Project 21372. All analyses are to be completed at Impact Level 2. All analyses are to be completed following the identified procedures. Any deviations to the procedures must be documented and this documentation must accompany the analytical data. All analytical data are returned to the Laboratory Support Office.

SAL SAMPLE PREPARATION INSTRUCTIONS FOR SEGMENTS AND QUARTER-SEGMENTS:

The following tank material samples were transferred from the HLRF:

CORE IDENTIFICATION	ACL NUMBER
Core 99 - Segment 1 (homogenized, mechanical)	95-07941
Core 99 - Segment 2 (drainable liquid)	95-07932
Core 99 - Quarter-Segment 2A (homogenized, manual)	95-07942
Core 99 - Quarter-Segment 2D (homogenized, manual)	95-07943
Core 99 - Segment 3 (drainable liquid)	95-07935
Core 99 - Quarter-Segment 3A (homogenized, manual)	95-07944

CORE IDENTIFICATION	ACL NUMBER
Core 99 - Quarter-Segment 4A (homogenized, mechanical)	95-07945
Core 99 - Quarter-Segment 4B (homogenized, mechanical)	95-07946
Core 99 - Quarter-Segment 4C (homogenized, mechanical)	95-07947
Core 99 - Quarter-Segment 4D (homogenized, mechanical)	95-07948

The following sample preparation steps are required:

Method		Procedure
Acid Digestion for ICP - liquid (QC Requirements: Duplicate, Blank, Spike, Spike Control)	(WPkg K28862)	PNL-ALO-128
Caustic Fusion - NaOH (QC Requirements - Radchem: Duplicate, Blank) (QC Requirements - ICP : 1 Duplicate per batch, Blank, Post Digestion Spike)	(WPkg K28863)	PNL-ALO-114
Caustic Fusion - KOH (QC Requirements: Duplicate, Blank, Post Digestion Spike)	(WPkg K28863)	PNL-ALO-115
Water Leach (QC Requirements - IC: Duplicate, Blank, Spike, Spike Control) (QC Requirements - ICP: Duplicate, Blank)	(WPkg K28864)	PNL-ALO-103
Total CN Prep (QC Requirements: Duplicate, Blank, Spike, Spike Control)	(WPkg K28868)	PNL-ALO-285

REQUESTED ANALYSES FOR SEGMENTS & QUARTER-SEGMENTS:

Requested Analysis	Procedure Number	Task Leader	WP#
ICP (Acid, Fusion, Water Leach)	PNL-ALO-211	Urie	K28866
IC (Water Leach)	PNL-ALO-212	Urie	K28867
CN (Direct)	PNL-ALO-285	Urie	K28868
TOC by Hot Persulfate (Direct)	PNL-ALO-381	Steele	K28869
Total Alpha (Fusion)	PNL-ALO-421	Greenwood	K28870
AEA (Pu-239/240) (Fusion)	PNL-ALO-422/423	Greenwood	K28871
GEA (Fusion)	PNL-ALO-450	Greenwood	K28872

Requested Analysis	Procedure Number	Task Leader	WP#
Total Beta (Fusion)	PNL-ALO-430/431	Greenwood	K28873
Sr-90 (Fusion)	PNL-ALO-433/431	Greenwood	K28874
U-Laser (Fusion)	PNL-ALO-445	Greenwood	K28875

SAMPLE IDENTIFICATION SYSTEM FOR SEGMENT AND QUARTER-SEGMENTS:

The following sample identification system will be followed. All samples will be idenitified as 95-XXXXX-Y#, where 95-XXXXX is the ACL number. The "Y" letter will identify a Sample Preparation Method. The "#" identifies replicate analyses using the sample preparation method (i.e., duplicates, spikes, blanks, etc.). The Sample Preparation Methods codes are:

A	Acid Digestion for ICP
C	Water Leach
D	Direct
G	Cyanide Sample Prep
H	Caustic Fusion - KOH
J	Carbon
N	Caustic Fusion - NaOH

Subject: Tank BY-108 Sample Prep Documentational Error

The "Controlling Procedure" block on many Sample Prep Sheets supporting BY-108 characterization incorrectly listed "PNL-ALO-110". The correct procedural citation should have been "PNL-ALO-010" in all cases. The major effect of PNL-ALO-010 is that it invokes internal Chain of Custody. This was accomplished real time as samples traversed through the laboratory.

Please address any questions or concerns related to this error directly to me.

Subject Observations Performed on BY108

This memorandum serves as confirmation that all sample preparation activities (i.e., Water Leach, Acid Extraction and Fusion) used to process BY108 samples for analyses were subject to continual observation. The observations were conducted between 9/6/95 and 9/11/95. Observations were not conducted during homogeneity testing nor were they conducted on subsequent analyses such as TOC, CN and Hg.

The observations were conducted as assistance to the SAL but were also conducted to gain better understanding of the complexities associated with this scope of work.

Observations were conducted by one or more of the following personnel:

Kristine Kuhl-Klinger, Quality Operations — 9/19/95 Date

Orelia Bredt, Quality Operations — 9/20/95 Date

Karla Smith, SAL Operations — 9/19/95 Date

WHC-SD-WM-DP-145, REV. 1

KOH FUSION AND SOLUBILITY TEST FOR HOMOGENIZATION CHECK

Scanning Thermogravimetric Analysis (TGA) and Differential Scanning Calorimetry (DSC) were performed on the unhomogenized solids and drainable liquids from Core 99 Segments 1 through 4. These two thermal analysis techniques are useful in determining the thermal stability and reactivity of the material. DSC measures heat released or absorbed while the temperature of the sample is increased at a constant rate. Data generated by the DSC analysis is often used to measure thermal decomposition temperatures, heats of reaction, reaction temperatures, melting points and solid-solid transition temperatures. TGA measures the mass of a sample while the temperature of the sample is increased at a constant rate. The TGA data is used to measure thermal decomposition temperatures, water content and reaction temperatures. Both methods can be modified to measure isothermal changes in the material and provide complimentary information.

The calibration of the DSC and TGA instruments were checked before running these samples. An indium standard was run on the DSC to check the temperature and enthalpy calibrations. The balance calibration of the TGA was checked with a 100 mg standard weight, and the temperature calibration was checked with a lead standard. The temperature and enthalpy calibration checks were all within 1°C and 0.2 J/g of their reported values, and the balance calibration was within 0.01 mg.

The results from the DSC and TGA analyses are reported in Tables 1-6 and 1-7, respectively. The temperature range of the scans was from ambient to 550°C, with a scan rate of 10°C per minute. These analyses were all performed in platinum pans under nitrogen cover gas.

The major transition in all of these samples was an endotherm due to water loss from the sample. This was also the major mass loss in all of the samples. The onset temperature of this transition could not be measured because the transition began at the initial temperature of the run (ambient temperature). The water loss endotherm ends at approximately 200°C. This endotherm is a complicated system of several unresolvable transitions with each sample containing slightly different proportions of these transitions.

An exotherm was identified in all quarter segment samples from Segment 4 and the drainable liquids. This exotherm has an onset temperature of between 197 and 225°C. The enthalpy of this transition varied with each quarter segment. The temperature range for this transition was from 195 to 400°C. It appears that this exotherm is commingled with some endothermic behavior which cannot be resolved; therefore, it is difficult to determine onset temperatures for each sample. The enthalpy of this transition is also dependent upon resolution of this exotherm for the commingled endotherms and the initial water loss endotherm. In most cases the most conservative approach (the largest exothermic energy) has been taken.

In Segments 1 through 3 a second endotherm is observed. Several transitions are observed in this endotherm and the onset temperature varies depending upon the size of the first transition in comparison with the second

transition. It appears that the onset temperature for the first transition in this endotherm is 220°C, and the onset temperature for the second transition is between 250 and 260°C.

The TGA analysis also indicated two different waste types in this core sample. All of the segments had a large mass loss associated with the water loss endotherm. This mass loss was observed between ambient temperature and 180°C. A small mass loss was observed over the remainder of the temperature range of the TGA analysis for all of the Segment 4 samples, but no significant transitions were observed at higher temperatures. In the Segment 1 through 3 solid samples, a second significant mass loss was observed. This mass loss has an onset temperature of approximately 245°C. This transition correlates with the second endothermic transition observed in the DSC analyses. These samples also continued to have a small mass loss throughout the remainder of the temperature range.

Density Measurement

Tank 241-BY-108 Core 99

General Instruction:

1. Keep the sample in a sealed container as much as possible to prevent the sample from drying.

2. All requested weights fro sample plus container are for a closed container.

3. Identify the instrument used for any measurement by reference number or by calibration ID and provide the calibration expiration date.

4. Check the blances daily with the wieghts i the cell. Record the check weights on the test instruction or data sheets.

M&TE List:

C-Cell Balance:

Calib ID 388-06-01-020 Calib. Exp. Date 11/7/95

Signature Scott D [illegible] Date 9/22/95 LRB _____ Page _____

1. Check the balance calibration with a the check weight available in the cell.

   Measured Mass 199.998 g

   Actual Mass 200.000 g

2. Measure the density of each of the solid samples using the displacement method. Mineral Oil should be used as the fluid. Graduated cylinders should be used to determine the volume of the mineral oil and the sample. Record these volumes and masses.

Sample #7322

Introduction to Inorganic Primary Data Package

This section of the BY-108 Core 99 Primary Data Package contains primary or "raw" data collected during preparation and analysis of inorganic samples. All analytical information is tracked by the laboratory sample number. Assessment of the primary analytical data will require in-depth knowledge of the methodology.

DATA QUALITY REVIEW

I have reviewed the following data for completeness and for compliance with project requirements.

Analyte - ICP - KOH Fusion

Data Package/Report - BY-108 Core 99

Project No. - 21372

ACL Numbers -

95-07941-H1T	95-07941-H2T	95-07941-HCB
95-07942-H1	95-07942-H2	95-07942-H3
95-07943-H1	95-07943-H2	
95-07944-H1	95-07944-H2	
95-07945-H1	95-07945-H2	95-07945-H3
95-07946-H1T	95-07946-H2T	95-07946-HCB
95-07947-H1	95-07947-H2	
95-07948-H1	95-07948-H2

Note:
1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
7) If RPD flagged with "*", then RPD >20% and sample & duplicate results >MDL.
8) If Percent Difference (%D) >10% and sample results >5x MDL, chemical/physical interferences may exist.
9) Data, including calibration/QC, archived File ICP-325-405-1/95D256a

Note:
1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
7) If RPD flagged with "*", then RPD >20% and sample & duplicate results >MDL.
8) If Percent Difference (%D) >10% and sample >5x MDL, chemical/physical interferences may exist.
9) Data, including calibration/QC, archived File ICP-325-405-1/95D256a

Note:
1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
7) If RPD flagged with "*", then RPD >20% and sample & duplicate results >MDL.
8) If Percent Difference (%D) >10% and sample results >5x MDL, chemical/physical interferences may exist.
9) Data, including calibration/QC, archived File ICP-325-405-1/95D256a

Note:
1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
7) If RPD flagged with "*", then RPD >20% and sample & duplicate results >MDL.
8) If Percent Difference (%D) >10% and sample results >5x MDL, chemical/physical interferences may exist.
9) Data, including calibration/QC, archived File ICP-325-405-1/95D256a

DATA QUALITY REVIEW

I have reviewed the following data for completeness and for compliance with project requirements.

Analyte - ICP - Na2O2 Fusion and Acid Digestion

Data Package/Report - BY-108 Core 99

Project No. - 21372

ACL Numbers - 95-07932-A1 95-07932-A2 95-007932-A3 95-07932-A4 95-07932-A5
95-07941-N1 95-07941-N2 95-07941-N3
95-07945-N1 95-07946-N1 95-07947-N1 95-07948-N1

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported adjusted for the an "average sample volume".
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/mL) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) ">MDL" indicates analyte found in process blank above the MDL.

8) Data, including calibration/QC, archived File ICP-325-405-1/95D255a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Above 5 times MDL, precision is estimated at +/-10% and accuracy at +/-15%.
3) Where "Blank" results are >IDL the blank has been subtracted from the "Spike Control".
4) Spike Flag (N) indicates spike is outside the QC recovery criteria.
5) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
6) If spike is <25% of sample concentration, Rec is not calculated as indicated by the "n/a".
7) If sample or duplicate results are <MDL then average is not calculated (i.e., "---").

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported adjusted for the an "average sample volume".
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/mL) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", then RPD >20% AND both sample and duplicate results >MDL.

8) Data, including calibration/QC, archived File ICP-325-405-1/ 95D255a

Note:
1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
7) If RPD flagged with "*", then RPD >20% and sample & duplicate results >MDL.
8) If Percent Difference (%D) >10% and sample results >5x MDL, chemical/physical interferences may exist.
9) Data, including calibration/QC, archived File ICP-325-405-1/95D255a

Note:
1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
7) If RPD flagged with "*", then RPD >20% and sample & duplicate results >MDL.
8) If Percent Difference (%D) >10% and sample results >5x MDL, chemical/physical interferences may exist.
9) Data, including calibration/QC, archived File ICP-325-405-1/95D255a

DATA QUALITY REVIEW

I have reviewed the following data for completeness and for compliance with project requirements.

Analyte - ICP - KOH & Na2O2 Spike Re-runs

Data Package/Report - BY-108 Core 99

Project No. - 21372

ACL Numbers - 95-07941-N1 95-07941-H1T

PNL ACL Quality Representative

9/22/95
Date

Project: TWRS
Procedure: PNL-ALO-211

Note: 1) Method Detecion Limit (MDL) = 10x IDL; "( )" results <MDL but =>IDL.
2) Above 5 times MDL, results reportable to 2 1/2 significant digits.
3) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
4) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
5) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
6) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).

DON'T SAY IT -- *Write It!*

Date: September 21, 1995

To: file: ICP-325-405-1

From: JJ Wagner

Subject: Post-Digestion Spike composition used on re-run 9-19-95

(file: 092195.DSI)

A post-digestion spike was prepared from two reagent solutions. Aliquots from each reagent was added to an aliquot of BY108 Core 99 fusion prepared sample and analyzed by ICPAES on 09-20-95 (95D262A). The post-digestion spike and sample aliquot mixture resulted in an equivalent sample dilution of 5 fold.

The post-digestion spike was prepared by thoroughly mixing 2 mL of 2% acid diluent (HNO_3), 1 mL of a quality control working standard "MCVA", 1 mL of "Dilute SST Spike" reagent[1], and 1 mL of sample (sample prepared by either KOH/Ni fusion or Na_2O_2/Zr fusion procedure).

Note[1]: "Dilute SST Spike" (barcode: 950907H901) was prepared from a 20 fold dilution of "SST Spike (8/95) Reagent" (barcode: 950830H901) on 09-07-95.

Following, on the next page, is a list of analytes and concentrations contained in each of the reagents used to prepare the Post-Digestion Spike.

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported adjusted for the an "average sample volume".
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/mL) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/950254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/95D254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.

8) Data, including calibration/QC, archived File ICP-325-405-1/95D254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.

8) Data, including calibration/QC, archived File ICP-325-405-1/95D254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/95D254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/95D254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If Percent Difference (%D) >10% and sample results >5X MDL, chemical/physical interferences may exist.
7) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/95D254a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
7) ">MDL" indicates analyte found in process blank above the MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/95D244a

Note:
1) Above 5 times MDL, results reportable to 2 1/2 significant digits. "( )" results <MDL but =>IDL.
2) Blank is reported in ug/g "equivalence" to indicate blank effect on sample results.
3) The process "blank" has not been subtracted from the "Sample & Duplicate" results.
4) Above 5 times the MDL, precision is estimated at +/-10% and accuracy at +/-15%.
5) "ND" = Not Detected; Estimated Sample Detection Limit (ug/g) = (IDL in ug/mL) * (Dil Fctr).
6) If 20% flag = "*", Then RPD >20% and both sample results >MDL.
7) ">MDL" indicates analyte found in process blank above the MDL.
8) Data, including calibration/QC, archived File ICP-325-405-1/95D244a

Ion Chromatography

The samples in this group, derived from Tank BY-108, Core 99, were extracted using procedure PNL-ALO-110 and were analyzed for fluoride, chloride, nitrite, nitrate, phosphate, and sulfate (commonly referred to as anions) using PNL-ALO-212, a procedure adapted from EPA Method 300.0. The sample preparation and analysis were performed in the 325 building in the 300 area by staff members of the Analytical Chemistry Laboratory - Inorganic Analysis Group (ACL-I) at Battelle-PNL.

Two drainable liquids, 95-07932/Segment 2 and 95-07935/Segment 3, and eight solid samples derived from the four quarter segments have been analyzed. The quarter segment samples are 95-07941/QS1, 95-07942/QS2A, 95-07943/QS2D, 95-07944/QS3A, 95-07945/QS4A, 95-07946/QS4B, 95-07947/QS4C, and 95-07948/QS4D.

Accuracy and Precision in IC results

The IC anions analysis system was calibrated with six calibration standards ranging from 0.5 - 7.5 ppm for the halides (F, Cl) and from 0.5 - 30 ppm for the oxy-anions (NO_2, NO_3, PO_4, SO_4). The accuracy of the calibration was checked by analyzing three independently derived verification standards at approximately 17%, 50%, and 75% of the calibration range maximum.

The accuracy of reported values between 20-80% of the calibration maximum has been estimated to be ±10%, unless otherwise noted in the Discussion section of this report. This level of accuracy may be considered achievable throughout the calibration range unless otherwise stated in this narrative. The accuracy decreases and errors increase for lower analyte levels and may be 100% at the method detection limit, which is defined as the analyte level in the lowest calibration standard.

Quality Control

The current TWRS criterion for acceptance of data, that the spiked blank values for the anions of interest are quantitated within ±10%, has been satisfied except for chloride (95-07932-C5: 120%) and nitrite (95-07932-C5: 88% and 95-07941-C5: 86%). Further details are to be found in the Discussion section.

The current TWRS criterion for acceptance of data, that the spiked sample values for the anions of interest are quantitated within ±10%, has not been satisfied except for sulfate (95-07932-C4). Further details are included in the Discussion section.

The current TWRS criterion for acceptance of data, that the RPD values for the anions of interest should be within ±10%, has not been satisfied for all of the seven anions. In some cases, the RPD values exceed the ACL limit of 20%. This subject is included in the Discussion section.

The continuing calibration verifications (CCV) for NO_2, SO_4 indicate a bias of about 10% and a bias of 12-13% for PO_4. This issue is discussed in greater detail in the Discussion section.

Discussion of the data

1. Bias in quantitation

   The chromatographic columns used in this work (Dionex AG4A/AS4A) have demonstrated erratic behavior in quantitation during the analysis of these BY-108 samples. The cause of the problem has not been determined, primarily due to the occasional manifestation of out-of-control responses.

   However, multiple analyses over a period of weeks have led us to believe that the performance of this system has degraded from the nominal acceptance window of ±10% to a level no greater than ±15%. This phenomenon, which may potentially be caused by insoluble sample matrix components which were deposited on the column, is currently under investigation and is expected to be resolved in the near future.

   The bias observed in the quantitation of nitrite, phosphate, and sulfate is also attributed to this condition of the column. An analytical strategy to clean the column and to prevent the recurrence of this behavior is currently being discussed with Dionex.

2. Fluoride

   The presence of organic anions has complicated the quantitation of fluoride and all results should be considered to be overestimated. This problem can be resolved by using a gradient elution method which will separate organic species such as formate and acetate from fluoride.

   Most BY-108 samples do not contain detectable levels of free fluoride and spike recovery calculations, especially following rounding, are to be evaluated in the light of this information. Sample detection limits approach the spike level used in both spiked samples.

   The sample which shows the greatest variation of fluoride, 95-07945, is derived from the heel of the tank - a region expected to be heterogeneous. All other samples show RPD values within 20%.

3. Chloride

   Free chloride levels are low in the tank (<0.1%) and the measurement of spike recoveries is likely be affected when quantitating at these low levels. RPD values and spike recoveries are within 20% for this analyte and there is no special hypothesis which need to be considered to explain this data.

4. Nitrite

   RPD values and spike recoveries are within 20% for this analyte and there is no special hypothesis which need to be considered to explain this data.

5. Nitrate

   Two samples, 95-07944 and 07945, show significant RPD values for this analyte. Reanalysis of the extracts, on two separate days, confirms the quantitation within 10%. The variation is considered to be real and is attributed to sample heterogeneity.

   All other RPD values fall within the 20% window and spike recoveries associated with sample and the blank are 11% or lower. System performance is considered to be acceptable for this analyte.

6. Phosphate

   Phosphate levels show the greatest variation in 95-07944, 95-07945 and 95-07946 but these values are supported by the ICP results. As with the low spike recovery for 95-07932 (76%), these observations are attributed to sample heterogeneity and not due to failures of the instrumentation.

7. Sulfate

   The two samples which high variations are 95-07945 and 95-07948 - both derived from QS4, which is derived from the heel of the tank. Since insoluble sulfates are expected in this tank, the possibility of sample heterogeneity is considered a reasonable explanation for the data. Reanalysis of sample replicates yields values within 15% of reported values. Sample spike recoveries are quite acceptable at 93 and 87% and the spiked blanks are also recovered at acceptable levels (95%, 97%).

8. Criteria for selection of ±10% window (RPD and spike recoveries)

   The ±10% window selected as the acceptance criterion for this work has been apparently been chosen without any serious consideration of the statistical basis of variation in analyzing tank wastes. However, if this arbitrary value is to be considered a realistic criterion for future work, tank samples need to be homogenized and sub-sampled in a statistically controlled manner to avoid contributions to analytical variance due to sampling errors.

   Replicate (20-30) analysis, by each analytical technique to be used at Hanford, will also be needed to establish matrix dependent statistical parameters such as variance (standard deviation) and confidence intervals. Without this level of attention, the arbitrary selection of a ±10% range as a data acceptance criterion is without technical merit.

Data presentation (see data summary sheet)

The reported data is presented, by analyte, in six tables. This format has been used to allow flexibility in handling sample sets of different sizes. Each line in a page contains the QC information associated with a particular sample.

The labels "1", "2", "3", "4", and "5" have been used to identify the sample, duplicate, spiked sample, spiked blank and blank, respectively.

A density of 1.00 g/mL is assumed for all diluents and solutions used in these analyses. A nominal 1.00 g sample wight has been assumed for calculations involving the spiked blank. Complete dissolution of the sample, nominally assigned a density of 1.00 g/ml, has also been assumed.

Sample dilutions have been made so as to match the diluent with the eluant as closely as possible for these analyses. The reported results have been rounded by an order of magnitude reflecting the dilution of samples prior to analysis. " < " values reflect analyte levels lower than the calculated detection limit.

The following terms and equations may be used to compute the rounding operations carried out in the summary data sheets.

SDF: Sample Dilution Factor
EDF: Extraction Dilution factor
ADF: Analytical Dilution factor
SDL: Sample Detection Limit (μg/g)
MDL: Method Detection Limit (μg/mL)
RF(x): Rounding factor for "x": $(10^{RF(x)} < SDL < 10^{RF(x)+1})$
"x": Numeric Label used to identify sample, duplicate, etc.
RF(sp): Rounding factor for added spike

EQUATIONS USED

SDF(x) = EDF(x) * ADF(x); "x" = 1, 2, 3, 4, 5

SDL(x) = MDL * SDF(x)

RF(x) = INT (LOG(SDL(x))); integer component of LOG(SDL(x))

2 < SDL(1)/RF(1) < 6; sample detection limits can range from two to six times the rounding factor

RF(1) = RF(2) = RF(3); sample, duplicate and sample spike have the same rounding factor

RF(sp) = RF(4); spike added and the blank spike have the same rounding factor

1. Nomenclature used for this data set: 1 = Sample; 2 = Duplicate; 3 = Blank ; 4 = Sample Spike; 5 = Spike Control.
2. Diluent volumes have been rounded to the nearest 10 mg in these calculations.
3. Volumes of SST-IC 1(spike standard) used for the spiked sample and the spike control have been assigned a density of 1g/ml.
4. All calculations assume total dissolution of the sample; sample solution density has been assigned a value of 1g/ml.
5. Samples 95-07932 and 95-07935 are drainable liquids, the rest are solids.

SAMPLES ANALYZED AT BATTELLE-PNL, ACL-INORGANIC IC LAB, ROOM 400, 325 BLDG ANALYST: M. M. O'Neill

M & TE ID: WA83665 (for PNL-ALO-212 & for PNL-ALO-271); System 1 ID: WC28133, System 2 ID: WC28134

Comment :

****REPORT GENERATION FOR LIQUID SAMPLES****

This compiled data sheet may be used for report generation, %RPD calculations, and spike recovery calculations.

Divide values in this table by DIL ((100/INJ VOL) X Manual Dilution from Data Review Sheet), to obtain the concentration in the analyzed solutions.

Approx. DL values (ug/ml, liquids) may be found by multiplying DIL by 0.25 and 0.5 for halides and oxy-anions, respectively.

M&TE ID: WD02513,PN900907

METHOD: PNL-MA 599-ALO-212, Var. Loop Size

Analyst. M. Miller 9-28-95 Reviewer PK Meletiu 9/29/95.

****REPORT GENERATION FOR LIQUID SAMPLES****

This compiled data sheet may be used for report generation, %RPD calculations, and spike recovery calculations.

Divide values in this table by DIL ((100/INJ VOL) X Manual Dilution from Data Review Sheet), to obtain the concentration in the analyzed solutions.

Approx. DL values (ug/ml, liquids) may be found by multiplying DIL by 0.25 and 0.5 for halides and oxy-anions, respectively.

Format File Name: C:\DX\METHOD\DEFAULT.PRF	

Integration Parameters

Starting Peak Width (seconds)	10.0
Peak Threshold	24.662
Peak Area Reject	30000
Area Reject for Reference Peaks	30000

Data Events

Time	Description
0.00	Force exponential skim
0.00	Stop peak detection
0.85	Start peak detection
1.08	Void volume treatment for this peak
2.00	Force baseline at start of all peaks
2.70	Double bunching factor

Calibration Parameters

Number Of Levels for Calibration	6
Force Calibration Curve Through Origin	No
Calibration Fit Type	Quadratic
Replace Or Average Calibrations	Replace
External or Internal Calibration	External
Calculate Unknowns by Area or Height	Area
Default Sample Volume	15.0
Default Dilution Factor	1.0
Default Response Factor for Unknown Peaks	0.0
Calibration Standard Volume	100.0
Internal Standard Amount in Samples	1.0
Amount Units	ppm

DIONEX METHOD PARAMETERS - 2ANIONS2.MET

Method Comment: CALIBRATED ON 07/31/95 USING CAL STDS PREPD. 06/09/95. *** FLOW RATE: 1.8 MLS/ MIN*** SRS WAS SUPPLIED WITH DDI WATER VIA A POSITIVE DISPLACEMENT PUMP AT 14 STROKE RATE.
Column ID: AG4A/AS4A
Analyst ID: MMO

System Parameters

System Name: ANIONS2	
Number of Detectors	1
Run Time (minutes)	10.00
Sampling Rate (seconds)	0.20
Detector 1 Type	PED-Cond.
Detector 1 real time plot scale maximum (uS)	10.000
minimum	-1.000
Save Data File	Yes
Data File Name: C:\DX\DATA\9502102\95021021.D08	

-- DETECTOR 1 PARAMETERS --

Report Options

Create ASCII Report File	No
Print Report	Yes
Print All Components	No
Print Components Found	No

Print All Peaks	Yes
Print Unknown Peaks	No
Print Chromatogram	Yes
Autoscale Chromatogram Maximum	Yes
Autoscale Maximum Value Delay (minutes)	0.0
Autoscale Chromatogram Minimum	Yes
Autoscale Minimum Value Delay (minutes)	0.0
Fill Peaks with Color	No
Draw Grid Lines on Chromatogram	No
Show Component Fraction Numbers	No
Label with Peak Number	No
Label with Retention Times on Chromatogram	Yes
Label with Component Name	No
Format File Name: C:\DX\METHOD\DEFAULT.PRF	

Integration Parameters

Starting Peak Width (seconds)	10.0
Peak Threshold	24.662
Peak Area Reject	30000
Area Reject for Reference Peaks	30000

Data Events

Time	Description
0.00	Force exponential skim
0.00	Stop peak detection
0.85	Start peak detection
1.08	Void volume treatment for this peak
2.00	Force baseline at start of all peaks
2.70	Double bunching factor

Calibration Parameters

Number Of Levels for Calibration	6
Force Calibration Curve Through Origin	No
Calibration Fit Type	Quadratic
Replace Or Average Calibrations	Replace
External or Internal Calibration	External
Calculate Unknowns by Area or Height	Area
Default Sample Volume	100.0
Default Dilution Factor	1.0
Default Response Factor for Unknown Peaks	0.0
Calibration Standard Volume	100.0
Internal Standard Amount in Samples	1.0
Amount Units	ppm

From M. O'Neill

Subject BY 108 Samples: 95-07941 to 95-07948, and 95-07932 to 95-07935

The BY 108 tank samples were micro distilled by the SAL according to procedure PNL-ALO-285. Samples 95-07932 to 95-07935 were micro distilled on 9/12/95, and samples 95-07941 to 95-07948 were micro distilled on 9/13/95. The samples were stored at 4°C ± 2°C until analysis on 9/26/95 in lab 419 of building 325 according to procedure PNL-ALO-289. The Lachat QuikChem AE, equipped with an autosampler (M&TE # WC36517) was used to analyze the samples using method CN01. The samples were aliquoted and delivered to lab 419 by the SAL.

An ICV/CCV was micro distilled on 9/25/95 in lab 419. Recoveries for the ICV/CCV's were within acceptable limits of 100% ± 15%. The blank spike and matrix spike recoveries were also within acceptable limits for MCS-033, but not 100% ± 10% for the TCP. Relavtive percent difference are within acceptable limits with the exception of 95-7947 and 95-7948. After micro distillation of samples 95-7947-G1 and 95-7948-G2, it was noted that only a few drops of distillate was recovered, and values for these samples cannot be reported with confidence.

Sample ID	Flag	Cyanide Concentration (ug/g)	Cyanide Concentration ~~(ug/l)~~ ug/mL 9/28/95	Percent Recovery	RPD
95-7941-G1		<264*			
95-7941-G2		94.6			
95-7941-G3	B	0.64			
95-7941-G4				79%	
95-7941-G5				89%	
95-7942-G1		116			
95-7942-G2		120			3%
95-7943-G1		149			
95-7943-G2		135			10%
95-7944-G1		195			
95-7944-G2		191			2%
95-7945-G1		742			
95-7945-G2		760			2%
95-7946-G1		1660			

ES4-1900-001 (10/89)

Sample ID	Flag	Cyanide Concentration (ug/g)	Cyanide Concentration (ug/l)	Percent Recovery	RPD
95-7946-G2		1650			1%
95-7947-G1		27.5			
95-7947-G2		1660			
95-7948-G1		1150			
95-7948-G2		2.76			
95-7932-G1			715		
95-7932-G2			712		<1%
95-7932-G3	B		0.25		
95-7932-G4				88%	
95-7932-G5				88%	
95-7935-G1			521		
95-7935-G2			532		2%

*Sample 95-7941-G1 was titrated using 0.0192 N $AgNO_3$. After addition of 0.025 ml, one drop of 0.0192 N $AgNO_3$, the sample was titrated beyond the endpoint. The cyanide in the sample is reported as a less than value.

All sample and QC results can be found in system file: CN-325-419 Run Log #398.

(1) Spike concentration reported on page 2 of spreadsheet.
(2) Weight for these samples was converted to volume using a density of 1.008g/ml for the 0.25N NaOH soln. See Argentometric Titration for Total Cyanide in solids.
(3) Sample not included in distillation batch.
(4) A density of 1.43 g/ml was used to calculate ug/ml for samples 95-7932 and 95-7935.
(5) For sample 95-7941 the duplicate was used in the matrix spike recovery calculation because the sample was titrated.
* Values used in calculations are not rounded.
All dilutions prepared with 0.25 N NaOH diluant.
See Weight Calculation Sheet for values in Sample Mass and Sample Volume Columns.

(1) High values for these samples were not reproducible, and are probably due to dilution error.
(2) 95-7947G1 and 95-7948G2 had poor recoveries (Only a few drops of distillate was left in the tube), see SAL prep sheets.
See Weight Calculation Sheet for calculation of values in Sample Mass and Sample Volume columns.

23							
24		SEE ATTACHED FOR VOL. CALC. OF 95-7941 G1, G2 and 95-7941 G1, G2					

WORKSHEET NOTES:

[1] Sample volume titrated using AgNO3 is normally 100 ml of the 250 ml of distillate.

[2] AgNO3 concentration is normally 0.0192 N. 1.0 ml of AgNO3 (0.0192N) = 1.0 mg of CN titrated.

[3] CN concentration = [AgNO3 consumed(ml)- blank(ml) • 250 ml/100ml]/ sample wt (g)

ANALYST NOTES:

95-7941-G1:

Vol(ml) used to titrate sample: (0.045 - 0.02)ml = 0.025ml 0.0192N $AgNO_3$ ∴ $\frac{0.025\,mgCN}{1.1408g\,sample}\left(\frac{10^3 g}{Kg}\right) = \frac{263.99}{0.0947}$ mmo 9-27-95 2245 kg

Subject TOC/TIC/TC Analysis (Hot Persulfate Method) of BY-108 Samples

This work was done by the hot persulfate oxidation/coulometry detector method, Test Procedure PNL-ALO-381, rev. 0. The work was performed at Impact Level II. The M&TE No. for the carbon measurements is WC01713, the balance M&TE No. is 360-06-01-016, located in room 201 in 325 Bldg. The data is located on the record data sheets and review report spreadsheets and are on file in the LSO Records Office. The TIC standard was calcium carbonate and the TOC standard was glucose, both used in solid form for system standards as well as sample spikes. The estimated precision is ±10% and the estimated accuracy is ±15%. All results are reported in ugC/g, based on the weight of the sample.

QC Narrative: QC for this work involved system blanks, system standards, duplicates, and matrix spikes, each for both TIC and TOC. The work was performed in two batches on 9/19 and 9/20. System standard recoveries and system blanks all were within required limits, with average standard recoveries ranging from 91% to 96%. The matrix spike recoveries for the first batch, performed on sample segment 1, showed good results, 100% and 94%, for TIC and TOC, respectively. In contrast, the matrix spike recoveries for the second batch, performed on sample segment 4A, showed relatively poor results of 63% and 80%, respectively, for TIC and TOC. One comment recorded on the Data Sheet was that "Seg. 4A was quite dry", different from each of the other segments. The RPD is very small for this sample indicating good homogeneity, but the low spike recovery must indicate a matrix effect, perhaps due to the very high salt content. The ratio of spike-to-sample was good ranging from 50% to 110%, indicating no problem from this source.

The precision is very good for most samples, though there are a few cases of high RPD's. Samples showing greater than 20% RPD (28% to 36%) are Seg. 1 for TOC, Seg. 3A for TIC, TOC, and TC, and Seg. 4C for TOC. Seg. 3A must have some inhomogeneity, but no clear reason is identified for Seg. 1 and Seg. 4C. The method detection limit (MDL) for TIC (based on pooled historical data) is 9 ug, or 30 ugC/g based on the nominal weight used. The MDL for TOC is 16 ug, or 50 ugC/g, based on the nominal weight used.

Table of Results

ALO No.	Sample ID	wt (g)	TIC (ugC/g)	RSD (%)	TOC (ugC/g)	RSD (%)	TC (ugC/g)	RSD (%)

Notes:

(1) TIC and TOC are actually measured on the same sample. The TC is the sum of TIC and TOC.

(2) Percent recovery is determined for TIC and TOC using the respective standards, CaCO3, or glucose, and all sample results are corrected for percent recovery. All results are blank-corrected.

(3) The reported results have been rounded to two or three significant places, so some may slightly disagree with the spreadsheet review report.

Equations

% TIC (CaCO3) Recovery = [(S-B)/(Sample wt*e+6*0.1199)]*100
% TOC (Glucose) Recovery = [(S-B)/(Sample wt*e+6*0.400)]*100
TIC (ugC/g sample) = (TIC-Blk)/(Sample wt*Avg TIC Recov/100)
TOC (ugC/g sample) = (TOC-Blk)/(Sample wt*Avg TOC Recov/100)
TIC MS Recov (spike in g) = [(MS(ug)-B)*1e-6/(Avg TIC Recov/100)-S(ug/g)*Sample wt]*100/[spk wt*1e6*0.1199]
TOC MS Recov (spike in g) = [(MS(ug)-B)*1e-6/(Avg TOC Recov/100)-S(ug/g)*Sample wt]*100/[spk wt*1e6*0.400]
Due to the precision carried in the spreadsheet, some calculations may appear to be slightly off due to rounding errors.
The Pooled SD is the averaged SD for a recent list of 12 sample batches. MDL is based upon the Pooled SD. MDL = 3 x pooled SD.

Carbon Fraction in TIC (CaCO3) Standard = 0.1199
Carbon Fraction in TOC (Glucose) Standard = 0.4000

Equations

% TIC (CaCO3) Recovery = [(S-B)/(Sample wt*e+6*0.1199)]*100
% TOC (Glucose) Recovery = [(S-B)/(Sample wt*e+6*0.400)]*100
TIC (ugC/g sample) = (TIC-Blk)/(Sample wt*Avg TIC Recov/100)
TOC (ugC/g sample) = (TOC-Blk)/(Sample wt*Avg TOC Recov/100)
TIC MS Recov (spike in g) = [(MS(ug)-B)*1e-6/(Avg TIC Recov/100)-S(ug/g)*Sample wt]*100/[spk wt*1e6*0.1199]
TOC MS Recov (spike in g) = [(MS(ug)-B)*1e-6/(Avg TOC Recov/100)-S(ug/g)*Sample wt]*100/[spk wt*1e6*0.400]
Due to the precision carried in the spreadsheet, some calculations may appear to be slightly off due to rounding errors.
The Pooled SD is the averaged SD for a recent list of 12 sample batches. MDL is based upon the Pooled SD. MDL = 3 x pooled SD.

Carbon Fraction in TIC (CaCO3) Standard = 0.1199
Carbon Fraction in TOC (Glucose) Standard = 0.4000

Subject TC/TIC/TOC (Solutions by Dohrmann DC-80)
Results for BY-108 Drainable Liquids, Rev 1

This work is done by the UV-catalyzed persulfate/NDIR method, Test Procedure PNL-ALO-382, Rev. 0, "Solutions Analysis: Carbon", using the Dohrmann DC-80 Total Organic Carbon Analyzer. The M&TE No. for the carbon measurements is WA64102, M&TE No. for the balance is 362-06-01-046. The data is located in the ALO Records Office System File. TC standard used is potassium acid phthalate, lot# 52809, and the TIC standard is sodium carbonate, lot# 52815.

Narrative: The QC for this work involved a blank, duplicate, spiked blank, spiked sample, and 2nd vendor verification standard. Each was analyzed by a single injection. The precision (RPD) between sample and duplicate is 5% and 4% for 95-07932, and 28% and 11% for 95-07935, respectively for TC and TIC. The 28% RPD is unusually high and may indicate possible inhomogeneity for TC between sample and duplicate for 95-07935. The spiked-water blank recoveries were good at 110% and 98%, respectively, for TC and TIC. The sample spike recoveries, performed on sample 95-07935, were 130% and 69%, respectively for TC and TIC. No clear reason is determined for this wide range of spike recoveries, but they may indicate some matrix effect for sample 95-07935.

Precision and accuracy for this method are estimated at ±10% and ±15%, respectively. Note that the units are ugC/ml, based on the volume of the original sample, using a Prep Dilution Factor.

Sample ID		TC (ug/ml)	RPD (%)	TIC (ug/ml)	RPD (%)	TOC (ug/ml)	RPD (%)
95-07932	-C1	9900	5	8500	28	1400	72
	-C2	9500		6400		3100	
	-C3	64		<mdl		<mdl	
95-07935	-C1	9600	4	7200	11	2400	72
	-C2	9200		8100		1100	
	water spike	110% rec.		98% rec.			
	sample spike	130% rec.		69% rec.			

a) Only TC and TIC are actually measured. TOC is found by the subtraction of TIC from TC. Therefore no RPD is reported for TOC.

b) Matrix spike recovery was determined for TC and TIC using the respective standards.

c) An MDL was determined from the pooled SD of five batch blanks. MDL is set equal to 10x pooled SD, therefore is equal, with no dilution factor, to 0.5 ug/ml for TC, TOC and TIC. The MDL's for the above samples, with Prep Dilution Factor of 100x, is 50 ug/ml.

Sample Information:

Sample ID	Sample Size	Dilutn	TC (ug C)	TIC (UV off) (ug C)	Observations, Calculations (ug/ml)
50ppm std	1ml		48.46		
95-07935-c1	25ml		2.08		
"	50ml		4.34		
"	1ml	10x	9.77	7.38	TC = 9.77 - .18 = 9.63 X 10 = 96 TIC = 7.38 - .45 = 7.23 X 10 = 72
95-07935-c2	25ml		2.06		
"	50ml		4.11		
"	1ml	10x	9.13	8.02	TC = 9.13 - .14 = 8.99 X 10 = 90 TIC = 8.02 - .15 = 7.87 X 10 = 79
95-07935-c2 SPK	1ml	10x	14.74	10.68	
10ppm std	1ml		10.01	10.63	
10ppm Verification std	1ml		10.10	—	
Water Blank	1ml		.203	0.167	
50ppm std	1ml		48.92	48.83	

Pipet Calibrations (or other data):

No. F18615 (1.0 ml)	No. F18615 (0.5 ml)	No. F19066 (0.1 ml)
1.0026	0.4987	0.0996
1.0031	0.5012	0.1010
1.0019	0.5021	0.1008

TC Standard:
Potassium Acid Pthalate #52809
0.425 ±0.001g -> ~50 ml, add 100 ul H_3PO_4 and dilute to final volume 100 ml = 2000 ppm TC stock solution. 10 ppm TC working standard: 500 ul of 2000 ppm std -> 100ml.

TIC Standard
Sodium Carbonate #52815
0.883 ±0.001g -> 100 ml volume = 1000 ppm TIC stock solution. 10 ppm working standard: 1000 ul of 1000 ppm std to 100 ml.
